1. APPLICATION Platform LED Module is des Series for street light and flo Platform LED Module with thermal management by the	od light application. Fin, generally recom	This docume	ent especially sp	ecifies	
1-1 Modular Platform Modu	ıles.				
There are three different ty	pes of heat sink des	igns for Plat	form LED Modu	le,	
intended for thermal manag	ement either by eng	ine or by fix	ture.		
This document especially s	pecifies Platform LE	D Module v	vith Fin for the	rmal	
management by Modules	or Engines themselv	/es.			
a source			A		

(a) Module with Fin [Thermal management by Module/Engine]

(b) Module without Fin [Thermal management by Fixture]

March 02

### **1-2 Modular Platform Engine Series**

Typical operating current for one module is set at 700mA, which allows lumen output increment by 2100Im(nominal value) depending on the number of LED modules.

#### 1-2-1 Lumen Packages with LED Driver

Power Consumption (Engine, Nominal)	Modules (ea)	Driver Output Channels (ea)	Operating Current (mA)	Lumen Output (Im)
25W	1	1	700	2100
50W	2	1	700	4200
75W	3	1	700	6300
100W	4	2	700	8400
150W	6	2	700	12600

\* This Module is recommended using a Isolated PSU.

#### 1-2-2 Current Distribution across Modules

Current per module can vary depending on the Vf distribution of modules in parallel, deviating from the nominal operating current(700mA). The Vf distribution of modules is tightly controlled to achieve uniform driving currents.
